

Amendments To The Claims

The following list of the claims replaces all prior versions and lists of the claims in this application.

1. (Canceled)
2. (Previously Presented) The method of claim 4 wherein the second network is a company intranet.
3. (Previously Presented) The method of claim 4 wherein the first network is the Internet.
4. (Previously Presented) A method for providing network access, the method comprising:
 - providing a first access point for a first computing device;
 - accessing a first router through the first access point;
 - routing to a proxy server through the first router;
 - connecting the first computing device to a first network via the first router;
 - providing a second access point for a second computing device;
 - accessing a second router through the second access point;
 - connecting the second computing device to a second network via the second router; and
 - denying the first router any access to the second network.
5. (Previously Presented) The method of claim 4 further comprising providing web access filtering for the first computing device.
6. (Canceled)

7. (Previously Presented) The method of claim 4 further comprising providing a firewall to restrict access to the second network.

8. (Previously Presented) The method of claim 4 further comprising providing data encryption for the second computing device.

9. (Previously Presented) The method of claim 4 wherein the first computing device is a laptop computer.

10. (Previously Presented) The method of claim 4 wherein the first computing device is a cellular telephone.

11. (Previously Presented) The method of claim 4 wherein the first access point and the second access point belong to separate devices.

12. (Previously Presented) The method of claim 4 wherein the first router and the second router belong to separate devices.

13. (Canceled)

14. (Previously Presented) The computer readable medium of claim 16 wherein the first network is the Internet.

15. (Previously Presented) The computer readable medium of claim 16 wherein the second network is a company intranet.

16. (Currently Amended) A computer readable medium that stores ~~comprising~~ a plurality of instructions for execution by at least one computer processor, wherein the instructions are for:

- providing a first access point for a first computing device;
- accessing a first router through the first access point;
- routing to a proxy server through the first router;
- connecting the first computing device to a first network via the first router;
- providing a second access point for a second computing device;
- accessing a second router through the second access point;
- connecting the second computing device to a second network via the second router; and
- denying the first router any access to the second network.

17. (Previously Presented) The computer readable medium of claim 16 further comprising providing web access filtering for the first computing device.

18. (Canceled)

19. (Previously Presented) A system for providing network access, comprising:

- a first access point for interacting with a first computing device;
- a first router for serving the first access point and routing the first computing device to a proxy server for providing access to the Internet;
- a second access point for interacting with a second computing device;
- a second router for serving the second access point and providing access to a company intranet, wherein the first router is denied access to the company intranet.

20. (Previously Presented) The system of claim 19 wherein the first computing device is a laptop computer.
